

Ideas :-

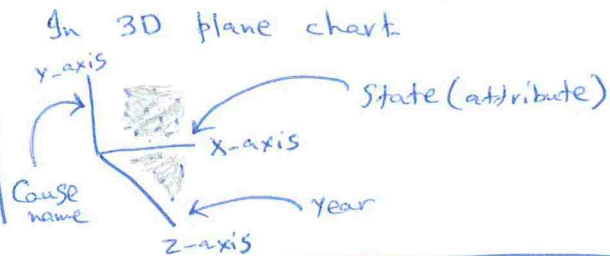

Leading causes of deaths in the USA
(from 1999 to 2017)

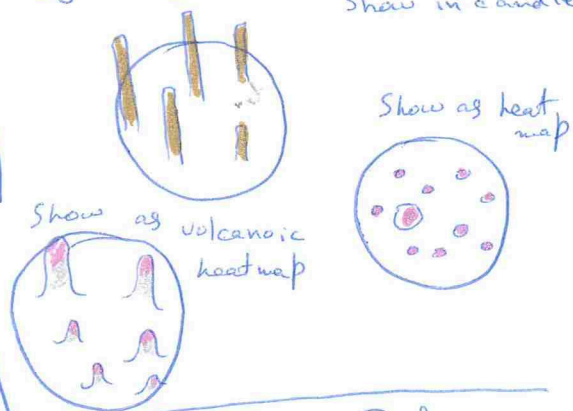

we can represent this in visualization as given below

In 3D USA map we can

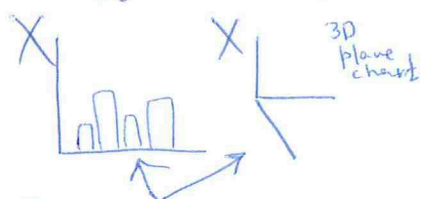

By using globe feature and show in candles

Filter :-

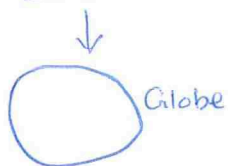

By implementing 2D Bar or 3D plane chart

we can visualize but not too much good.

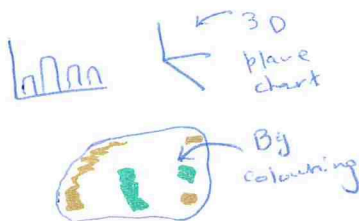

Because we can show the limited features

3D map (Globe)

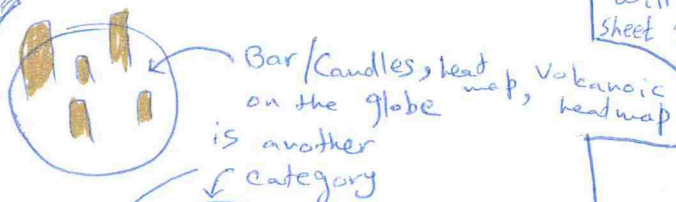

This is good to visualize in detail I think..

Categorize :-

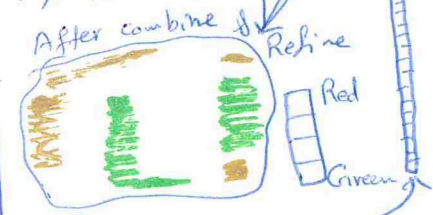

These three I think is in the same category because these are in plane charts.

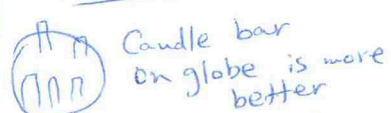

Combine & Refine :-

- 2D bar chart
- 3D plane chart
- 3D map

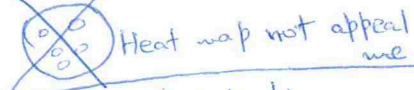

will be in sheet 2 (FDS)

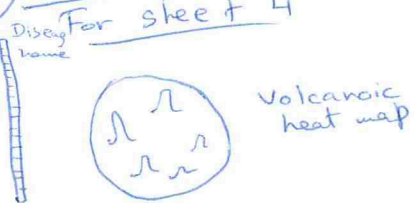

For sheet 3

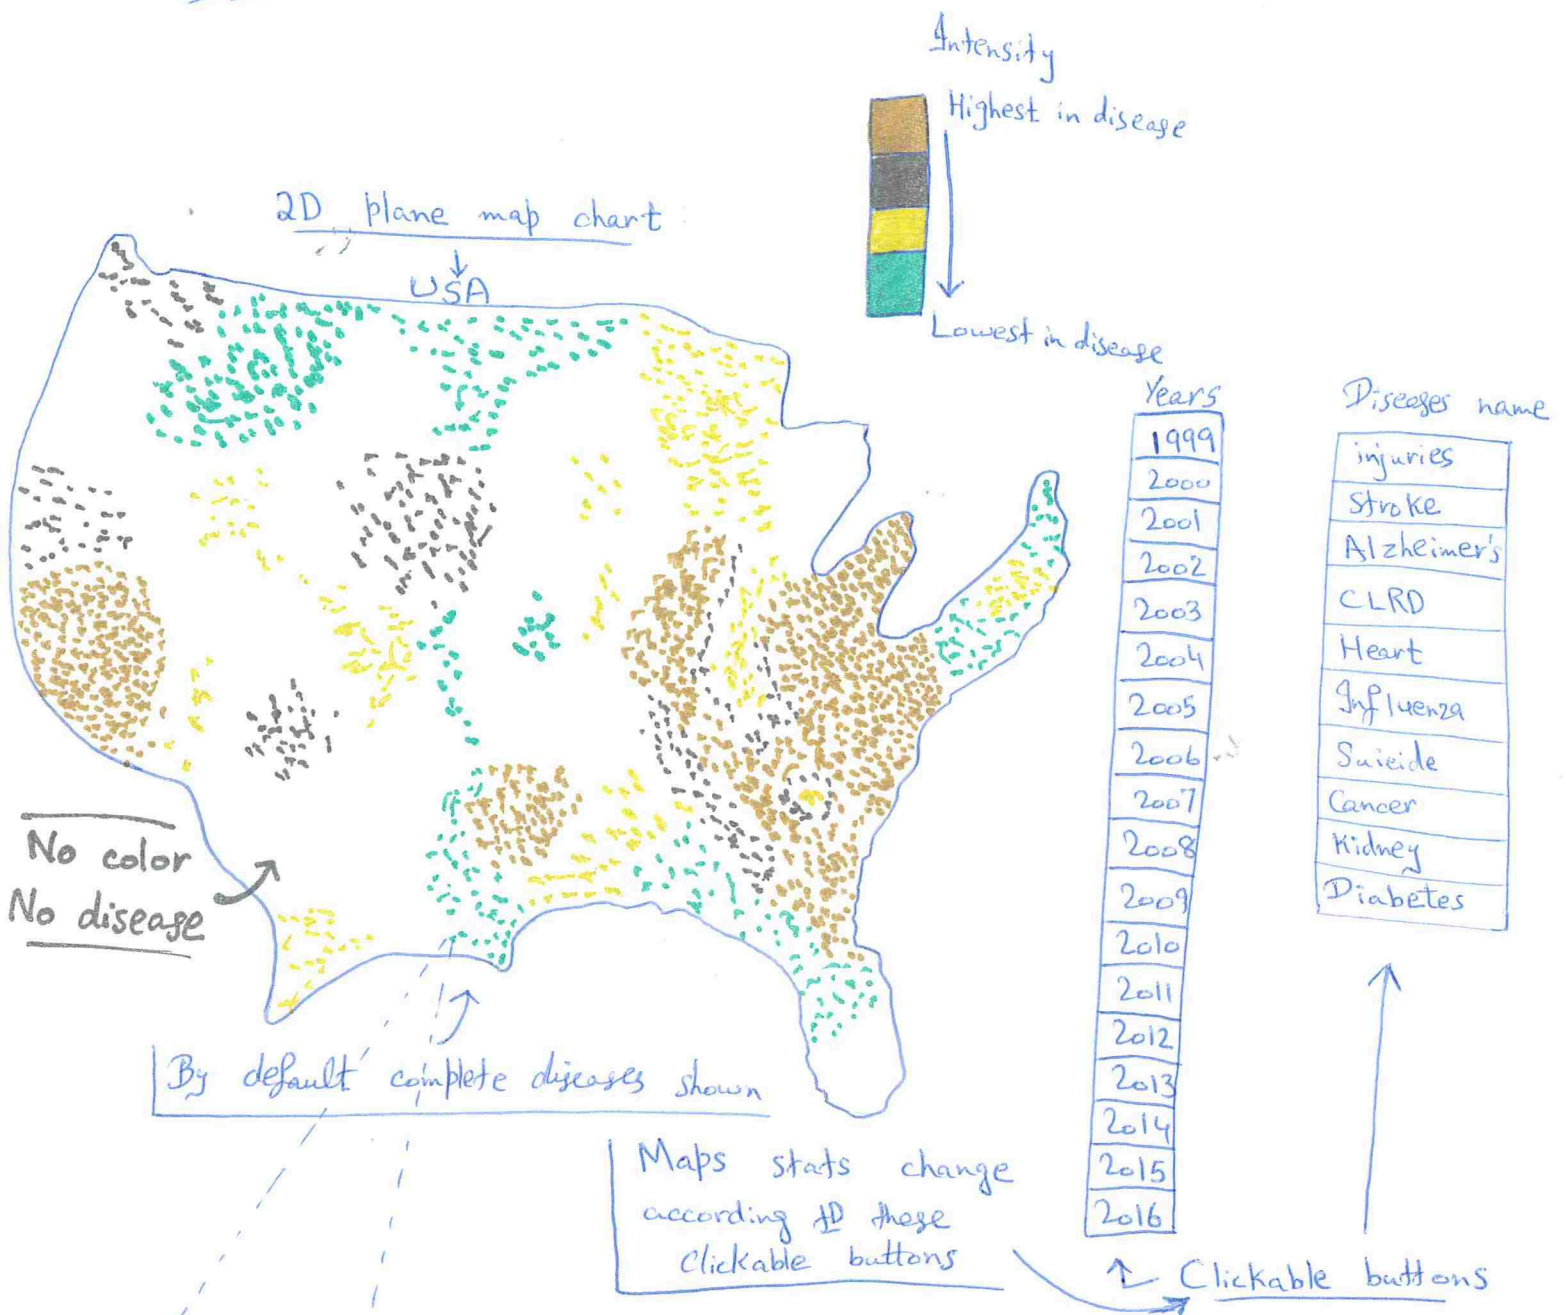

because we click any bar we can see the stats

For sheet 4

Sheet 2:

Advantages

- Clarity on the USA map
- Differentiate with colors

Disadvantages :-

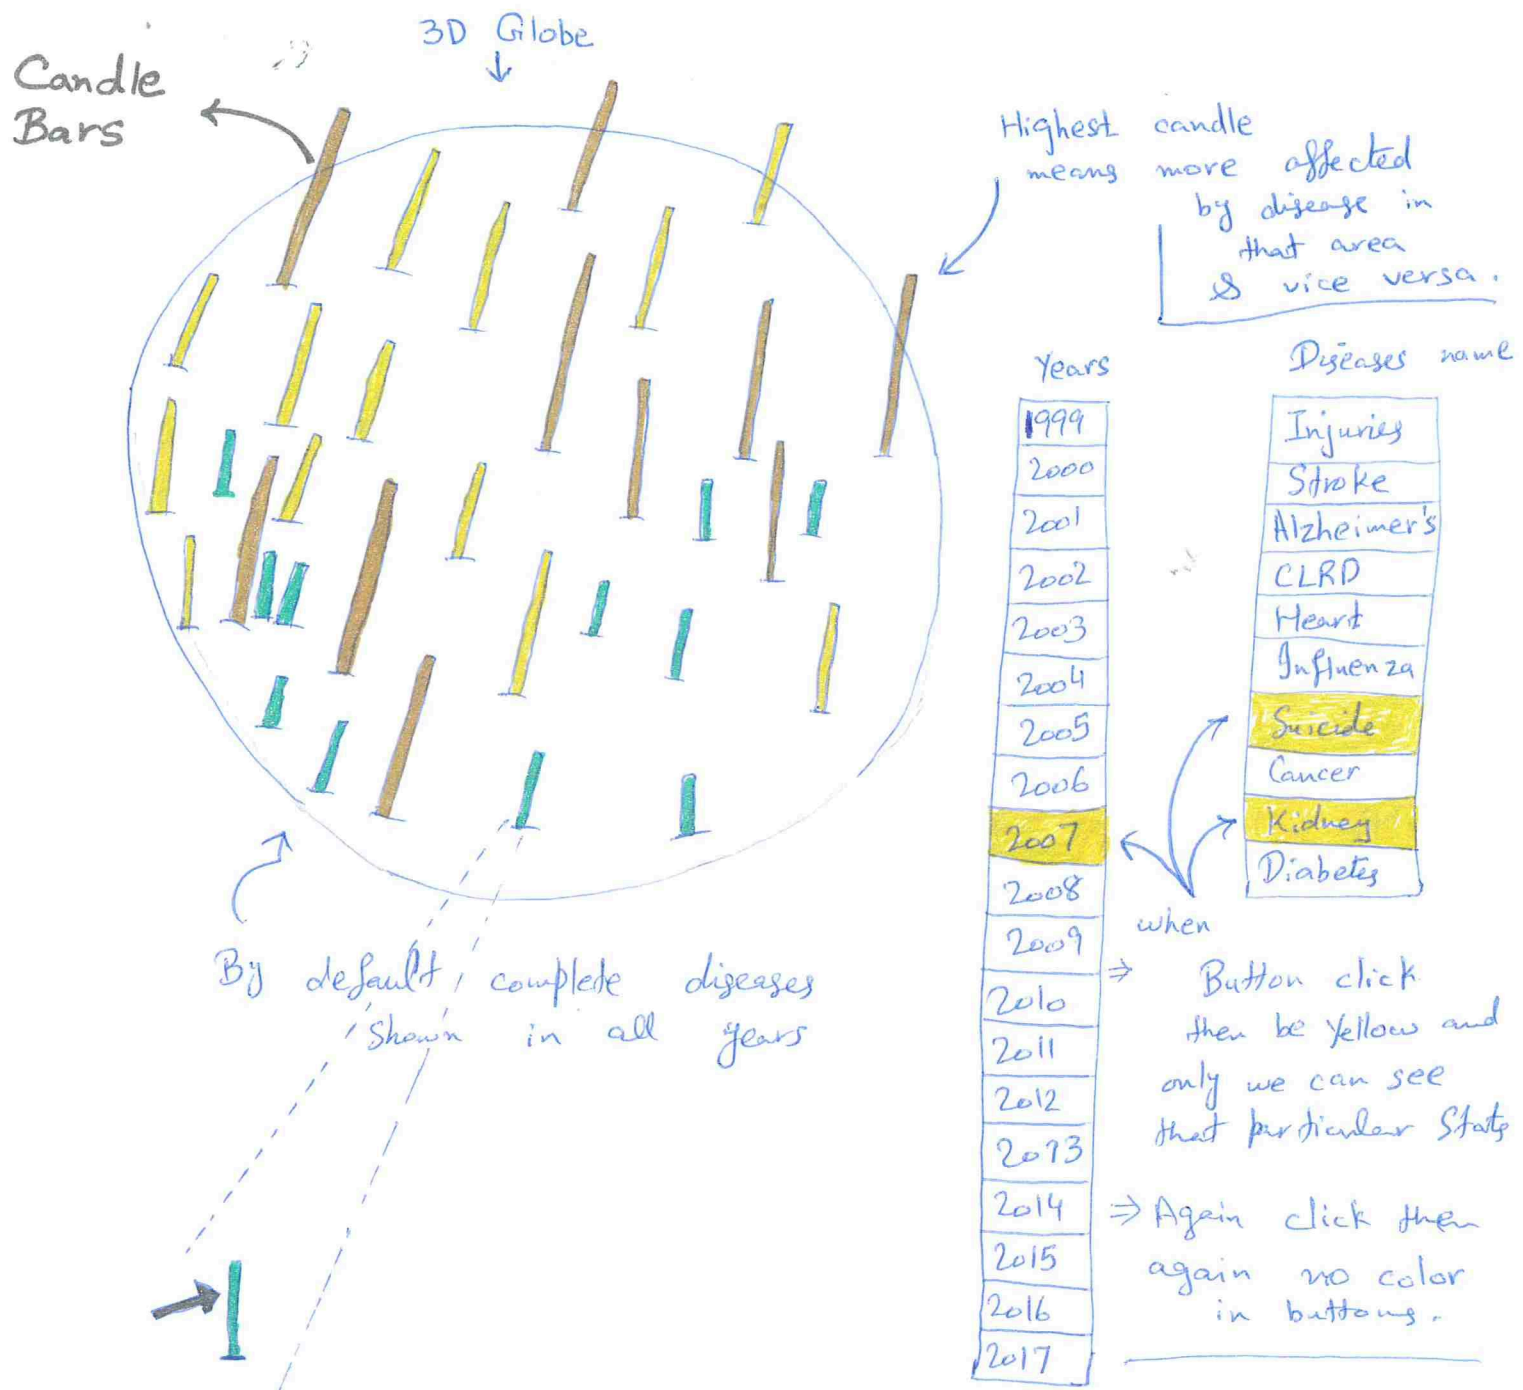

- It's only in 2D plane chart. visualization is good in this but on the globe or in 3D will be more interesting to see.

Implementation :-

- Through Api using .json
- with different CSS design code

When we hover with the cursor there disease name we can see

Sheet 3:-

when hover with the cursor, can see the disease name and years and all that (Stats)

Advantages:-

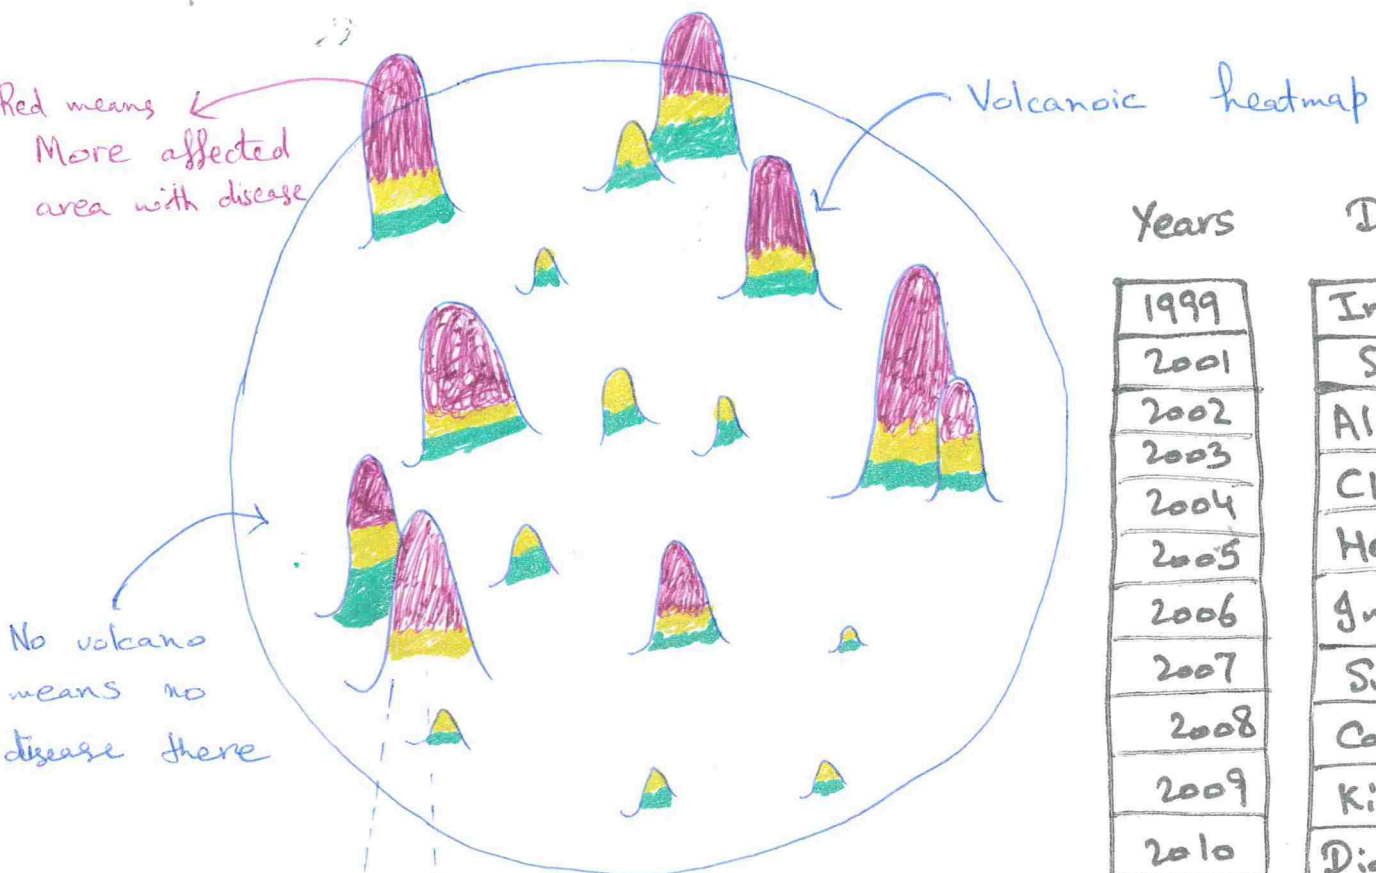

- ⇒ It should be clear visible in 3D map chart.
- ⇒ With candles bar, easily we can judge which area is more affected and need attention in coming years

Implementation:-

- ⇒ Using globe.gl api we can implement this and we can extend as many possible things through coding

Sheet 4:-

3D Globe

No volcano means no disease there

By default complete diseases shown

when hover then stats show

Stats

Diseases:- CLRD, Heart
Years:- 2006, 2008, 2009
Intensity:- High
Place:- Virginia

when from any clickable buttons we click then graphics on the globe will be change according to that data

Advantages:-

- Visualize in 3D for any person to see stats easily.
- Through coding implementation is easy.
- Easily change features with this api (globe.gl)

Years	Diseases name
1999	Injuries
2001	Stroke
2002	Alzheimer's
2003	CLRD
2004	Heart
2005	Influenza
2006	Suicide
2007	Cancer
2008	Kidney
2009	Diabetes
2010	
2011	
2012	
2013	
2014	
2015	
2016	
2017	

Clickable buttons

Implementation:-

- We can implement by globe.gl api and add the button features or addition of features by code in html or use another Api in that.

Sheet 5:
